

Exam

What to achieve

- The end result should be a rich analysis in AppOne that is released to your environment.
- Do it step-by-step.
 - First on the mandatory attributes
 - Adding other attributes & business logic
 - Tags & Due dates (see attachment)- Add the Archive activity (which is a timestamp stored per case)

Exam getting started

- Download the zip file (Exam.zip in Server data)
 - Optional: check data on your laptop
- In the Server Data create a folder with your own name
 - Upload the data files (csv) in here
- Extract the Connector to get started (Contained in Exam.zip)
- Create a new branch for your Connector. Create a workspace
 - Load the tables by setting the Connection String parameters
- Create a new branch for AppOne (to start fresh)

Some guidance

- Don't want to see empty cases
 - Filter out empty Case ID's with cases_filter
- The cases table contains info when each case is archived
 - Add this as an activity
- The user table contains info between which period a user was in a team
 - So directly joining User to Events will not work

Exam getting started 2

- Adding extra input tables to UiPath Process Mining
 - Right click in the table column
 - Select *New table -> Connection String*
 - Right click on the new Table -> Advanced -> Table Options
 - Change Table Scope to *Server* and click OK
 - Double click or edit the Connection string to add the path to the file
 - (Copy the Connection String of another tables)

Exam tips 1

- Do not work in your earlier workspaces!
- Do it step-by-step.
 - First on the mandatory attributes
 - Adding other attributes & business logic
 - Tags & Due dates
- Think about visibility of attributes.
- Use clear names and commit messages!
- Commit steps, not everything at once.
- Put attributes in groups for clarity.
- Export your dataset regularly to view results in AppOne

Exam tips 2

- To add new attributes into ApplicationOne :
 - Option1:
 - Open ApplicationOne with the data set which contains the new attributes.
 - Map the attributes to the Generic_case and Generic_events attribute in AppOne
 - Option 2
 - Open ApplicationOne with the data set which contains the new attributes.
 - Double-click the input table which should contain these attributes.
 - Press OK.
 - Press No when it asks if you want to reload data
 - Press Yes when it asks if you want to add new attributes.
 - Link the attributes in the places you want to use them
